About Veleta Water

The importance of clean drinking water is no secret. In 2018, we made it our goal to provide water to people not only in its purest, but also in its healthiest form. It was this thought that led to the birth of Veleta. It is invention of Mr. Arroon Khhochage. Veleta is the mineral water bottling brand of Khochge Agro Food and Beverages.

We started our endeavour with setting up an ultra-modern water purification and bottling plant in Kolhapur.

Since then, we have earned the credibility of our customers and become one of the most reliable mineral water providers of the region.

Here are some of the certifications and accreditations awarded to Veleta-
BIS - IS 14543:2005 (Licence no CML- 7500184309)
ISO 22000:2005 (Food Safety Management)

What makes Veleta exceptional?

A well maintained hygienic, state-of-the-art plant specially designed in accordance with BIS regulations for packaging 20 litre mineral water bottles. The water pH level and TDS level are maintained as per BIS norms.

Veleta's latest generation plant specially designed to preserve the original nature of the water. Compiling with all national & international requirements.

Veleta adherence to our firm quality standards and a rigorous 9-step water treatment process that makes sure that each bottle has only goodness in it.

Careful Collection
[Natural ground water resources with advance filtration system]

Sand Filtration
[Removal of superfluous particles as small as 30 microns (0.001mm)]

Granular activated charcoal Filtration
[Removal of colour, odour and hazardous pesticides and other chemicals]

Reverse Osmosis
[Elimination of excess minerals and salts]

Mineralization
[Adding appropriate amounts of essential minerals to make the water healthier and sweet]

Micron Filtration
[Removal of the smallest contaminant particles (as small as 0.45 microns) from the water.]

UV Filtration
[Using UV-C rays to kill or inactivate the microorganisms in the water, making them harmless for the consumer]

Ozonisation
Treatment of water by Ozone is more effective than Chlorine, and it does not remain in the water.

Bottling

After the filtration process, each bottle is marked with a code indicating the batch number and the date of packaging. Every batch goes through several quality checks to make sure that each bottle meets Veleta's high quality and purity standards.
